

# DG Research and Innovation

#### Researchers' Report 2014

**Scorecards** 

Deloitte.

#### **Table of Contents**

| Intr        | oduction  | 3  |
|-------------|---|----|
| 1.          | Researchers (Full Time Equivalent) per thousand labour force, Europe  |    |
| 2.          | Women as Grade A academic staff, Europe   | 9  |
| 3.<br>pub   | Researcher posts advertised through the EURAXESS Jobs portal per thousand researchers in the sector, Europe                     |    |
| 4.          | New doctoral graduates (ISCED 6) per thousand population aged 25-34, Europe   | 13 |
| 5.          | Researchers employed on fixed-term contracts, Europe  | 15 |
| 6.          | Non-EU doctoral candidates as a percentage of all doctoral candidates, Europe (%)   | 17 |
| 7.          | Doctoral candidates (ISCED 6) with a citizenship of another EU Member State, Europe   | 19 |
| 8.<br>in tl | Researchers having spent a period of at least three months as a researcher in another countries last 10 years, Europe, 2012 (%) | •  |
| 9.          | International scientific co-publications per million population, Europe   | 23 |
| 10.<br>tota | Scientific publications in the top 10% most-cited publications worldwide as a percentage o                                      |    |

#### Introduction

The multi-coloured scorecards allow for quick visualisation of the countries' individual progress (or lack thereof) between two different dates for a number of key indicators<sup>1</sup>. The indicators were selected based on their a) relevance for the issue to be monitored, b) comparability between dates (availability of data) and c) robustness of the data set. Scorecards serve as a means of monitoring change between different dates by showing if the value of an indicator has increased, decreased or remained stable. The indicators are presented for the following 'monitoring categories':

- The stock of researchers in Europe;
- Women in the research profession;
- Open, transparent and merit-based recruitment;
- Education and training;
- Working conditions in the research profession;
- Mobility and international attractiveness.

The table below presents an overview of the key 10 indicators, the data source(s) and the year(s) of reference.

Table 1: Scorecards - Key 10 indicators, The Researchers' Report 2014

| Indicators   | Data source(s)   | Year(s) of reference |
|--|--|----------------------|
| The stock of researchers in  | Europe   |                      |
| Researchers (Full Time Equivalent) per thousand labour force,<br>Europe, 2010 and 2011   | Eurostat   | 2010, 2011           |
| Women in the research pro  | ofession   |                      |
| Women as Grade A academic staff, Europe, 2002 and 2010 (%)   | WiS database/SHE figures                                     | 2002, 2010           |
| Open, transparent and merit-base   | ed recruitment   |                      |
| Researcher posts advertised through the EURAXESS Jobs portal per thousand researchers in the public sector, Europe, 2012 and 2013                    | EURAXESS Jobs Portal   | 2012, 2013           |
| Education and training   | ng   |                      |
| New doctoral graduates (ISCED 6) per thousand population aged 25-34, Europe, 2010 and 2011   | Eurostat   | 2010, 2011           |
| Working conditions in the resear   | rch profession   |                      |
| Researchers employed on fixed-term contracts, Europe, 2012 (%)   | MORE2 study  | 2012                 |
| Mobility and international att   | ractiveness  |                      |
| Non-EU doctoral candidates as a percentage of all doctoral candidates, Europe, 2010 and 2011 (%)   | Eurostat/Innovation Union Scoreboard 2014                    | 2010, 2011           |
| Doctoral candidates (ISCED 6) with a citizenship of another EU Member State, Europe, 2010 and 2011 (%)   | Eurostat   | 2010, 2011           |
| Researchers (post-PhD) having spent a period of at least three months as a researcher in another country in the last 10 years, Europe, 2012 (%)      | MORE2 study  | 2012                 |
| International scientific co-publications per million population, Europe, 2011 and 2012   | Science<br>Metrix/Scopus/Innovation<br>Union Scoreboard 2014 | 2011, 2012           |
| Scientific publications in the top 10% most-cited publications worldwide as a percentage of total scientific publications, Europe, 2008 and 2009 (%) | Science<br>Metrix/Scopus/Innovation<br>Union Scoreboard 2014 | 2008, 2009           |

<sup>&</sup>lt;sup>1</sup> These indicators were agreed upon by the ERA SGHRM (Steering Group on Human Resources and Mobility).

Each scorecard refers to two dimensions:

- 1. **Score**: the value of the indicator for the latest year available is summarised in four value ranges (from 4 to 1) represented by colours, from 4 (green) to 1 (orange);
- 2. **Progress**: the value of the indicator against its value from the previous year (or latest year available). This makes it possible to monitor progress (or lack thereof) by showing if the value of the indicator has increased ( $\uparrow$ ), decreased ( $\downarrow$ ) or remained stable ( $\leftrightarrow$ ).

The countries (and in some cases the EU<sup>2</sup>, US, Japan and China) are put in four performance groups<sup>3</sup>:

Table 2: Scorecards - Methodology

| Category  | Calculation  |  |  |  |  |  |
|---|--|--|--|--|--|--|
| Green (4)   | The country's/region's performance is at least 20% above the EU average. |  |  |  |  |  |
| Light green (3)   | The country's/region's performance is between -10% and +20% of the EU    |  |  |  |  |  |
| 0 0 ()  | average.   |  |  |  |  |  |
| Yellow (2)  | The country's/region's performance is between -50% and -10% of the EU    |  |  |  |  |  |
| 1010W (2)   | average.   |  |  |  |  |  |
| Orange (1) The country's/region's performance is below 50% of the EU average. |  |  |  |  |  |  |

Source: Deloitte

In most cases, we observe a positive trend in the EU performance between two different dates:

- Between 2010 and 2011, the number of researchers (FTE) per 1 000 labour force increased in the EU-28 by 1.1%, less than in Japan (5.2%) and slightly less than in the US (1.3%); Over a longer timeframe, the figure has increased by 38% since 2000;
- Between 2002 and 2010, the average percentage of women Grade A academic staff in the EU increased from 15.3% to 19.8% (+29%);
- Between 2012 and 2013, the average number of research posts advertised via the EURAXESS Jobs portal per thousand researchers in the public sector in the EU-28 increased from 40.8% to 43.7% (+7%); Since 2009, the increase has been eightfold;
- The number of new doctoral graduates (ISCED 6) per thousand population aged 25-34 in the EU increased from 1.6 in 2010 to 1.7 in 2011 (+6%);
- Between 2010 and 2011, the EU share of non-EU doctoral candidates as a percentage of all doctoral candidates increased from 19.1% to 24.2% (+27%);
- Between 2011 and 2012, the number of international scientific co-publications per million population in the EU-28 increased from 331 in 2011 to 343 in 2012 (+4%). The EU-28 average was 343 co-publications per million population in comparison with 448 in the United States, 215 in Japan and 46 in China;
- Between 2008 and 2009, EU-28 scientific publications in the top 10% most-cited publications worldwide as a percentage of all scientific publications increased from 10.8% to 11.0% (+1%).

The table below presents the performance of the EU (and in some cases of the US, Japan and China) for a number of indicators, showing the name of the indicator(s), the values per year of reference and the long- and short-term trend for each indicator (where data are available).

<sup>&</sup>lt;sup>2</sup> Since Croatia joined the EU on 1 July 2013, not all EU averages have been adapted yet; some still present the EU average for 27 countries only. Any difference between the EU and EU-28 averages is not considered statistically significant.

<sup>&</sup>lt;sup>3</sup> Based on the methodology applied in the "Innovation Union Scoreboard 2013", European Commission (2013)

Table 3: Scorecards - Current situation and trend per key indicator for the EUEU, US, China and Japan<sup>4</sup>

| Name of the indicator  | Values/<br>progress                   | Years of reference | El           | JEU  | United   | l States |          | xcept Hong<br>ong) | Jap               | an   |

Source: Deloitte

<sup>&</sup>lt;sup>5</sup> For the purposes of this indicator, countries reporting a comparatively low share of researchers employed on fixed-term contracts compared to the EU-average are presented on top (green).

<sup>&</sup>lt;sup>6</sup> Based on the average of EU-28 Member States.

<sup>&</sup>lt;sup>7</sup> International scientific co-publications are a proxy for the quality of scientific research as collaboration increases scientific productivity. The numerator refers to the number of scientific publications with at least one co-author based abroad (where abroad is non-EU for the EU-28).

#### 1. Researchers (Full Time Equivalent) per thousand labour force, Europe

Table 5: Value ranges - Researchers (Full Time Equivalent) per thousand labour force, Europe, 2010 and 2011

| The number of researchers (Full Time Equivalent) per thousand labour force is: |  |  |  |  |
|--|--|--|--|--|
| Green (4) At least 20% above the EU-28 average.                                |  |  |  |  |
| Light Green (3) Between -10% and +20% of the EU-28 average.                    |  |  |  |  |
| Yellow (2)  Between -50% and -10% of the EU-28 average.                        |  |  |  |  |
| Orange (1) Below 50% of the EU average.  |  |  |  |  |

The EU is lagging behind its main competitors in the share of researchers in the total labour force, despite a moderate increase between 2010 and 2011. In 2011, the ratio was 6.75 per 1 000 in the EU-28, compared to 9.63 in the US and 10.47 in Japan. The Nordic countries and Luxembourg are significantly higher than the EU average.

Between 2000 and 2011, the number of researchers (FTE) in relation to the labour force increased from 4.90 to 6.75 in the EU-28, up from 6.68 in 2010. The increase in the United States between 2000 and 2011 was from 9.0 to 9.63. In Japan, it was from 9.57 to 10.47, while China reported an increase from 0.95 to 1.63, still below any European country except Romania. (The total labour force – i.e. including both the employed and unemployed – was some 241 million in the EU-28 in 2011, compared to 155 million in the United States, 63 million in Japan and 807 million in China.)

Between 2010 and 2011, the number of researchers (FTE) per 1 000 labour force increased in Europe by 1.1%, less than in Japan (5.2%) and slightly less than in the US (1.3%).

Table 6: Scorecard: Researchers (Full Time Equivalent) per thousand labour force, EU-28, US, China, Japan, 2010 and 2011

| Region                   | 2010 | 2011 | Progress/2010 (%) |   |  |
|--------------------------|------|------|-------------------|---|--|
| EU                       | 6.7  | 6.7  | <b>↑</b>          | 1 |  |
| United States            | 9.5  | 9.6  | <b>↑</b>          | 1 |  |
| China (except Hong Kong) | 1.5  | 1.6  | <b>↑</b>          | 8 |  |
| Japan                    | 10.0 | 10.5 | <b>↑</b>          | 5 |  |

Source: Deloitte Data: Eurostat

All Nordic countries have a higher share of researchers (FTE) per thousand labour force than the US. Finland and Denmark rank highest of EU-28 countries, with more than fifteen researchers per thousand labour force – higher also than Japan.

Within the EU-28 in 2011, the share of researchers per thousand labour force was highest in two Nordic countries (Finland and Denmark). It was lowest in a number of Eastern European countries, such as Romania, Bulgaria, Poland and Latvia.

Table 7: Scorecard: Researchers (Full Time Equivalent) per thousand labour force, Europe, 2010 and 2011

| Country        | 2010 | 2011 | Progress | /2010 (%) |
|----------------|------|------|----------|-----------|

#### 2. Women as Grade A academic staff, Europe

Table 8: Value ranges – Women as Grade A<sup>8</sup> academic staff, Europe, 2002 and 2010 (%)

| The percentage of women as Grade A academic staff is:     |                              |  |  |
|---|------------------------------|--|--|
| Green (4) At least 20% above the EU average.              |                              |  |  |
| Light Green (3)  Between -10% and +20% of the EU average. |                              |  |  |
| Yellow (2) Between -50% and -10% of the EU average.       |                              |  |  |
| Orange (1)  | Below 50% of the EU average. |  |  |

The ratio of women in top-level positions in research between 2007 and 2010 rose in nearly every country but unevenly.

Between 2007 and 2010, the average percentage of women academic Grade A staff in the EU increased from 18.7% to 19.8%, and the majority of countries in the scope of this report reported an increase in the ratio of women in high-ranking academic positions.

Table 9: Scorecard: Women as Grade A academic staff, EU, 2002 and 2010 (%)

| Region | 2002 | 2010 | Progress/2002 (%) |    |
|--------|------|------|-------------------|----|
| EU     | 15.3 | 19.8 | <b>↑</b>          | 29 |

Source: Deloitte

Data: WiS database/SHE figures

The under-representation of women at the higher levels of the academic hierarchy is reflected in the share of women in Grade A academic positions. The culmination of a research career is reaching a top-level position. In 2010, the EU average of the share of women among Grade A academics was 19.8%. The proportion of women in top research positions was highest (>25%) in Romania (35.6%), followed by Latvia (32.1%), Turkey (28.1%), Croatia (26.4%), Switzerland (25.9%) and Bulgaria (25.9%). Cyprus (10.7%), Luxembourg (11.4%), Belgium (12.2%), the Czech Republic (13.1%), and the Netherlands (13.1%) reported lowest (<14%) figures for women in top-level academic positions.

The next 'She Figures' publication, with updated data, is due for publication by the end of 2015.

<sup>&</sup>lt;sup>8</sup> Grade A: The single highest grade/post at which research is normally conducted.

Table 10: Scorecard: Women as Grade A academic staff, Europe, 2002 and 2010 (%)

### 3. Researcher posts advertised through the EURAXESS Jobs portal per thousand researchers in the public sector, Europe

Table 11: Value ranges – Researcher posts advertised through the EURAXESS Jobs portal per thousand researchers in the public sector, Europe, 2011 and 2012

| The number of researcher posts advertised through the EURAXESS Jobs portal per thousand researchers in the public sector is: |   |  |  |  |  |
|--|---|--|--|--|--|
| Green (4) At least 20% above the EU-28 average.  |   |  |  |  |  |
| Light Green (3)  | Between -10% and +20% of the EU-28 average. |  |  |  |  |
| Yellow (2)  Between -50% and -10% of the EU-28 average.  |   |  |  |  |  |
| Orange (1)   | Below 50% of the EU-28 average.             |  |  |  |  |

The number of research posts advertised via the EURAXESS Jobs portal per thousand researchers in the public sector continued to rise in a number of European countries between 2012 and 2013, albeit at a different pace.

Between 2012 and 2013, the average number of research posts advertised via the EURAXESS Jobs portal per thousand researchers in the public sector in the EU-28 increased from 40.8 to 43.7 (+7%), and a number of countries within the scope of this report reported an increase in the number of research posts advertised on the portal, though the pattern of increases was uneven.

Table 12: Scorecard: Researcher posts advertised through the EURAXESS Jobs portal per thousand researchers in the public sector, EU-28, 2012 and 2013

| Region | 2012 | 2013 | Progress | /2012 (%) |
|--------|------|------|----------|-----------|
| EU     | 40.8 | 43.7 | <b>1</b> | 7         |

Source: Deloitte Data: Euraxess Jobs Portal

The share of research posts advertised on the EURAXESS Jobs portal per thousand researchers in the public sector provides an indication as to the level of (international) transparency in each country. Sweden, the Netherlands, Poland, Luxembourg, Croatia and Ireland rank best for the share of jobs posted on the EURAXESS Jobs portal.

Generally speaking, if job positions are not advertised publicly and widely, the chances of recruiting the best possible talent are more limited. In 2013, the average number of job postings on the EURAXESS Jobs portal per thousand researchers in the public sector for the EU-28 was 44, with a range from 160 in Sweden to five or fewer in several countries. The number of jobs advertised via the online platform was particularly high (>100) in Sweden (160), the Netherlands (154), Poland (143), Luxembourg (120), Croatia (110) and Ireland (105). Thus, researchers across Europe benefit from more open and transparent access to research-related jobs in these countries.

We note a low (<5) share of researchers posts advertised on the EURAXESS Jobs portal per thousand researchers in the public sector in a range of countries: Portugal, Serbia, Hungary, Latvia, Lithuania, Bulgaria, Turkey, Slovakia, FYROM and Malta. It is important to note that countries such as Germany,

which report a relatively low number of research posts advertised on the EURAXESS Jobs portal have set up national systems to advertise positions. Moreover, the publication of job vacancies on relevant Europe-wide online platforms such as EURAXESS Jobs is only one of many indications of an open, transparent and merit-based recruitment system.

Table 13: Scorecard - Researcher posts advertised through the EURAXESS Jobs portal per thousand researchers in the public sector, Europe, 2012 and 2013

| Country        | 2012  | 2013  | Progr    | ess/2012 (%) |
|----------------|-------|-------|----------|--------------|

#### 4. New doctoral graduates (ISCED 6) per thousand population aged 25-34, Europe

Table 14: Value ranges - New doctoral graduates (ISCED 6) per thousand population aged 25-34, Europe, 2010 and 2011

| The number of new doctoral graduates (ISCED 6) per thousand population aged 25-34 is: |  |  |  |
|---|--|--|--|
| Green (4)   | At least 20% above the EU average.       |  |  |
| Light Green (3)   | Between -10% and +20% of the EU average. |  |  |
| Yellow (2)  | Between -50% and -10% of the EU average. |  |  |
| Orange (1)  | Below 50% of the EU average.             |  |  |

The number of new doctoral graduates in the EU has risen significantly in the past decade, increasing from around 72 000 in 2000 to around 118 000 in 2011.

The number of new doctoral graduates in the EU increased from 72 251 (in 2000) to 117 958<sup>9</sup> (in 2011). The increase for the US was from 44 808 in 2000 to 73 041 in 2011. In Japan, the number of new doctoral graduates increased from 12 192 in 2000 to 15 910 in 2011.

The number of new doctoral graduates (ISCED 6) per thousand population aged 25-34 in the EU increased from 1.1 in 2000 to  $1.7^{10}$  in 2011. The increase in the United States was from 1.1 in 2000 to 1.8 in 2011, while in Japan, it went from 0.7 in 2000 to 1.0 in 2011.

Table 15: Scorecard: New doctoral graduates (ISCED 6) per thousand population aged 25-34, EU, US, China, Japan, 2010 and 2011

| Region        | 2010 | 2011 | Progress/2010 (%) |    |
|---------------|------|------|-------------------|----|
| EU            | 1.6  | 1.7  | <b>1</b>          | 6  |
| United States | 1.7  | 1.8  | <b>1</b>          | 6  |
| China         | 2.4  | 2.2  | <b>\</b>          | -7 |
| Japan         | 1.0  | 1.0  | $\leftrightarrow$ | 0  |

Source: Deloitte Data: Eurostat

The highest number of new doctoral graduates per thousand population aged 25-34 in Europe in 2011 was in Switzerland. The leading EU countries were Sweden, Germany, Finland, UK, Denmark and Austria.

In 2011, the average number of new doctoral graduates per thousand population aged 25-34 for the EU was 1.7, with a range from 3.5 in Switzerland to 0.5 or less in some other European countries.

#### 5. Researchers employed on fixed-term contracts, Europe

Table 17: Value ranges – Researchers employed on fixed-term contracts, Europe, 2012 (%)11

| The percentage of researchers employed on fixed-term contracts is: |  |  |  |
|--|--|--|--|
| Green (4)  | Below -80% of the EU average.            |  |  |
| Light Green (3)  | Between -80% and +10% of the EU average. |  |  |
| Yellow (2)   | Between 10% and 50% of the EU average.   |  |  |
| Orange (1)   | More than 50% of the EU average.         |  |  |

A significant proportion of researchers in the higher education sector are employed on a fixed-term contract or have no contract at all. This was most pronounced during earlier career stages.

The type of employment contract has a significant impact on the attractiveness of researchers' employment and working conditions. Young researchers are often employed on temporary short-term contracts to help carry out specific research projects to the detriment of academic independence, job security and sufficient social security. Senior researchers, on the other hand, are often employed on permanent contracts, with progression based on seniority rather than performance. This indicator should however be treated with caution as there are a number of other factors which can have a major impact on a researcher's working conditions. This includes the remuneration package, access to research funding, provision of training and career development, career prospects, etc.

In 2012, researchers with no contracts, 'others' (often student status) and those with a fixed-term contract of one year maximum accounted for 31% of R1<sup>12</sup> PhD researchers, 10% of R2<sup>13</sup>, 4% of R3<sup>14</sup> and 3% of R4<sup>15</sup>. Moreover, 55% of researchers in the R1 group with a PhD and 47% of the R2 group also had fixed-term contracts, albeit of a slightly longer duration than 12 months. These figures highlight the precarious contractual situation of early-stage researchers, particularly PhD researchers. The share of permanent (open-ended) contracts increases from lower (13% of R1 in PhD) to higher career stages (90% of R4). This suggests that researchers typically find stable positions only relatively late during their career paths, after having completed their doctorate<sup>16</sup>.

Table 18: Scorecard: Researchers employed on fixed-term contracts, EU, 2012 (%)

| Region | % of fixed-term contracts |
|--------|---------------------------|
| EU     | 34.3                      |

Data: MORE2 study "Support for continued data collection and analysis concerning mobility patterns and career paths of researchers", IDEA Consult (2013)

<sup>\*</sup> The individual countries' scores are presented in ascending order: the countries reporting a comparatively lower share of researchers employed on fixed-term contracts compared to the EU-average are presented on the top.

### 6. Non-EU doctoral candidates as a percentage of all doctoral candidates, Europe (%)

Table 20: Value ranges - Non-EU doctoral candidates as a percentage of all doctoral candidates, Europe, 2010 and 2011 (%)

| Non-EU doctoral candidates as percentage of all doctoral candidates is: |  |  |
|---|--|--|
| Green (4)   | At least 20% above the EU average.       |  |
| Light Green (3)   | Between -10% and +20% of the EU average. |  |
| Yellow (2)  | Between -50% and -10% of the EU average. |  |
| Orange (1)  | Below 50% of the EU average.             |  |

The share of non-EU doctoral candidates<sup>17</sup> as a percentage of all doctoral candidates serves as a useful indicator of the openness and attractiveness of a research system. The average share for the EU is 24.2%. Those above the EU average are the UK (30.6%) and France (35.4%).

The share of non-EU doctoral candidates serves as an indication of the openness and attractiveness of the research system. The average share of non-EU doctoral candidates is 24.2%.

Table 21: Scorecard: Non-EU doctoral candidates as a percentage of all doctoral candidates, EU, 2010 and 2011 (%)

| Region | 2010 | 2011 | Progress | s/2010 (%) |
|--------|------|------|----------|------------|
| EU     | 19.1 | 24.2 | <b>1</b> | 27         |

Source: Deloitte

Data: Eurostat/Innovation Union Scoreboard 2014

In the UK and France, the share of non-EU doctoral candidates is between 30% and 35%. The proportion of foreign doctoral candidates is even higher in Switzerland — almost half, and it is above 30% in Norway, but this includes those from EU countries. In addition to the cases of France and the UK, there is a relatively high share (10-20%) of non-EU doctoral candidates in a number of other Member States, e.g. Spain (18.0%), Denmark (17.7%), Portugal (12.0%) and Germany (11.2%) while the lowest share of non-EU doctoral candidates as a percentage of all doctoral candidates (<5%) is in a number of the new Member States, ranging from 4.2% in Estonia to 0.03% in Lithuania.

Table 22: Scorecard: Non-EU doctoral candidates as a percentage of all doctoral candidates, Europe, 2010 and 2011 (%)

| Country        | 2010 | 2011 | Progress/2010 (%) |    |
|----------------|------|------|-------------------|----|
| Switzerland    | 48.2 | 49.3 | <b>↑</b>          | 2  |

#### 7. Doctoral candidates (ISCED 6) with a citizenship of another EU Member State, Europe

Table 23: Value ranges - Doctoral candidates (ISCED 6) with a citizenship of another EU Member State, Europe, 2010 and 2011 (%)

| The percentage of doctoral candidates (ISCED 6) with a citizenship of another EU Member State is: |  |
|---|--|
| Green (4)   | At least 20% above the EU average.       |
| Light Green (3)   | Between -10% and +20% of the EU average. |
| Yellow (2)  | Between -50% and -10% of the EU average. |
| Orange (1)  | Below 50% of the EU average.             |

The Netherlands (20.4%)<sup>18</sup> is the EU country where the highest proportion of doctoral students from other EU countries are to be found, followed by Austria (18.5%), Ireland (16.9%) and the UK (16.2%). The EU average is 7.7%<sup>19</sup>. The Member States with the lowest relative inflows of doctoral candidates from other EU countries are some of the new Member States, and Italy and Portugal.

The highest level of doctoral candidates with citizenship of another EU Member State in 2011 (>10%) was in a number of the older Member States, e.g. the Netherlands (20.4%), Austria (18.5%), Ireland (16.9%), the UK (16.2%), Belgium (14.2%), Denmark (13.8%), and Sweden (10.9%). In terms of absolute numbers, the UK is the first choice (14 625), followed by Germany (10 700), France (5 886), Austria (4 807) and Spain (3 508). The lowest share (<5%) was in a number of the new Member States, ranging from 3.1% in Bulgaria to 0.2% in Lithuania.

## 8. Researchers having spent a period of at least three months as a researcher in another country in the last 10 years, Europe, 2012 (%)

Table 26: Value ranges - Researchers (post-PhD) having spent a period of at least three months as a researcher in another country in the last 10 years, Europe, 2012 (%)

| Researchers (post-PhD) having spent a period of at least three months as a researcher in another country in the last 10 years is: |  |
|---|--|
| Green (4)   | At least 20% above the EU average.       |
| Light Green (3)   | Between -10% and +20% of the EU average. |
| Yellow (2)  | Between -50% and -10% of the EU average. |
| Orange (1)  | Below 50% of the EU average.             |

Mobility is a feature of the career path of many researchers. Around one in three EU researchers (31%) in their post-PhD phase have been 'internationally mobile' for at least three months in the last 10 years.

Table 27: Scorecard: Researchers (post-PhD) having spent a period of at least three months as a researcher in another country in the last 10 years, EU, 2012 (%)

| Region | 2012 |
|--------|------|
| EU     | 31.0 |

Source: Deloitte

Data: MORE2 study "Support for continued data collection and analysis concerning mobility patterns and career paths of researchers", IDEA Consult (2013)

Switzerland and Denmark have the highest levels of internationally mobile researchers on this criterion (>50%) while researchers from Latvia, Romania, Croatia, Lithuania, Bulgaria, Czech Republic and Poland were the least mobile of those in the study population (<20%). In Greece, Hungary, Ireland, Spain, France and the UK, on the other hand, a relatively large group of researchers was mobile for three months more than ten years ago (>20%).

Table 28: Scorecard: Researchers (post-PhD) having spent a period of at least three months as a researcher in another country in the last 10 years, Europe, 2012 (%)

| Country     | 2012 |
|-------------|------|
| Switzerland | 53.1 |

### 9. International scientific co-publications per million population, Europe

Table 29: Value ranges - International scientific co-publications per million population, Europe, 2011 and 2012

| The number of international scientific co-publications per million population is: |   |
|---|---|
| Green (4)   | At least 20% above the EU-28 average.       |
| Light Green (3)   | Between -10% and +20% of the EU-28 average. |
| Yellow (2)  | Between -50% and -10% of the EU-28 average. |
| Orange (1)  | Below 50% of the EU-28 average.             |

In 2012, the EU-28 was second to the United States in the production of international scientific co-publications.

In 2012, the EU-28 lagged behind the United States in terms of international scientific co-publications per million population<sup>20</sup>. The EU-28 average was around 343 co-publications per million population in comparison with around 448 in the United States, 215 in Japan and 46 in China. The EU-28 average should be seen in context: only co-publications with non-EU countries are included. This obviously creates a downward distortion. For individual Member States, the picture is different with many co-publishing more than the US in relative terms.

Switzerland and Iceland have very high levels, of more than 2 500 co-publications per million population, followed by a number of Nordic countries such as Denmark, Norway, Sweden and Finland (in descending order) and Luxembourg, Netherlands, Belgium, Austria, Ireland, Cyprus, Slovenia and UK with more than 1 000 co-publications per million population. The lowest number (<500) of co-publications per million population was in a number of new Member States, such as Croatia, Hungary, Malta, Slovakia, Lithuania, Poland, Bulgaria, Latvia and Romania (in descending order).

Table 30: Scorecard: International scientific co-publications per million population, EU-28, US, China, Japan, 2011 and 2012

| Region        | 2011 | 2012 | Progress/2011 (%) |    |
|---------------|------|------|-------------------|----|
| EU            | 331  | 343  | <b>↑</b>          | 4  |
| United States | 450  | 448  | <b>\</b>          | -1 |
| China         | 43   | 46   | <b>↑</b>          | 7  |
| Japan         | 211  | 215  | <b>1</b>          | 2  |

Source: Deloitte

Data: Science Metrix/Scopus/Innovation Union Scoreboard 2014

<sup>&</sup>lt;sup>20</sup> International scientific co-publications are a proxy for the quality of scientific research as collaboration increases scientific productivity. The numerator refers to the number of scientific publications with at least one co-author based abroad (where abroad is non-EU for the EU).

Table 31: Scorecard: International scientific co-publications per million population, Europe, 2011 and 2012

| Country        | 2011 | 2012 | Progress/2011 (%) |    |
|----------------|------|------|-------------------|----|
| Switzerland    | 2738 | 2894 | <b>1</b>          | 6  |
| Iceland        | 2648 | 2725 | <b>1</b>          | 3  |

### 10. Scientific publications in the top 10% most-cited publications worldwide as a percentage of total scientific publications, Europe

Table 32: Value ranges - Scientific publications in the top 10% most-cited publications worldwide as a percentage of all scientific publications, Europe, 2008 and 2009 (%)

| The number of scientific publications amounting to the top 10% most-cited publications worldwide as a percentage of total scientific publications is: |   |
|---|---|
| Green (4)   | At least 20% above the EU-28 average.       |
| Light Green (3)   | Between -10% and +20% of the EU-28 average. |
| Yellow (2)  | Between -50% and -10% of the EU-28 average. |
| Orange (1)  | Below 50% of the EU-28 average.             |

In 2009, the EU-28 lagged behind the US in terms of scientific publications in the top 10% most-cited publications worldwide. The indicator is a proxy for the excellence of the research system as highly cited publications are assumed to be of higher quality.

When it comes to the scientific quality of research worldwide, a better measure is a country's capacity to produce scientific publications with high international impact. The number of citations that a scientific publication generates is an indication of its excellence and its chance of generating further scientific results.

In 2009, 10.95% of EU-28 scientific publications were in the top 10% most-cited publications worldwide in comparison with 14.5% scientific publications produced in the United States.

Table 33: Scorecard: Scientific publications in the top 10% most-cited publications worldwide as a percentage of all scientific publications, EU-28, US, China, Japan, 2008 and 2009 (%)

| Region        | 2008 | 2009 | Progress/2008 (%) |    |
|---------------|------|------|-------------------|----|
| EU            | 10.8 | 11.0 | <b>1</b>          | 1  |
| United States | 14.3 | 14.5 | <b>↑</b>          | 1  |
| China         | 6.8  | 6.7  | <b>\</b>          | -2 |
| Japan         | 7.3  | 7.0  | <b>\</b>          | -4 |

Source: Deloitte

Data: Science Metrix/Scopus/Innovation Union Scoreboard 2014

Individually, the best performance (>10%) in the EU-28 was shown (in descending order) by Netherlands, Denmark, UK, Belgium, Sweden, Luxembourg, Germany, Ireland, Finland, Austria, Spain, France and Italy. Countries like France and Germany, where researchers are more likely to publish more in their own language, are more likely to underperform on this indicator relative to their real academic excellence. The share is lowest (<5%) in a number of new Member States (in descending order): Slovakia, Poland, Romania, Bulgaria, Croatia and Latvia.

Table 34: Scorecard: Scientific publications in the top 10% most-cited publications worldwide as a percentage of all scientific publications, Europe, 2008 and 2009 (%)
